

How to Import CA Certificate in Token

First of all you have to need visit <https://prodigisign.com/> website, and click on Root Certificate .

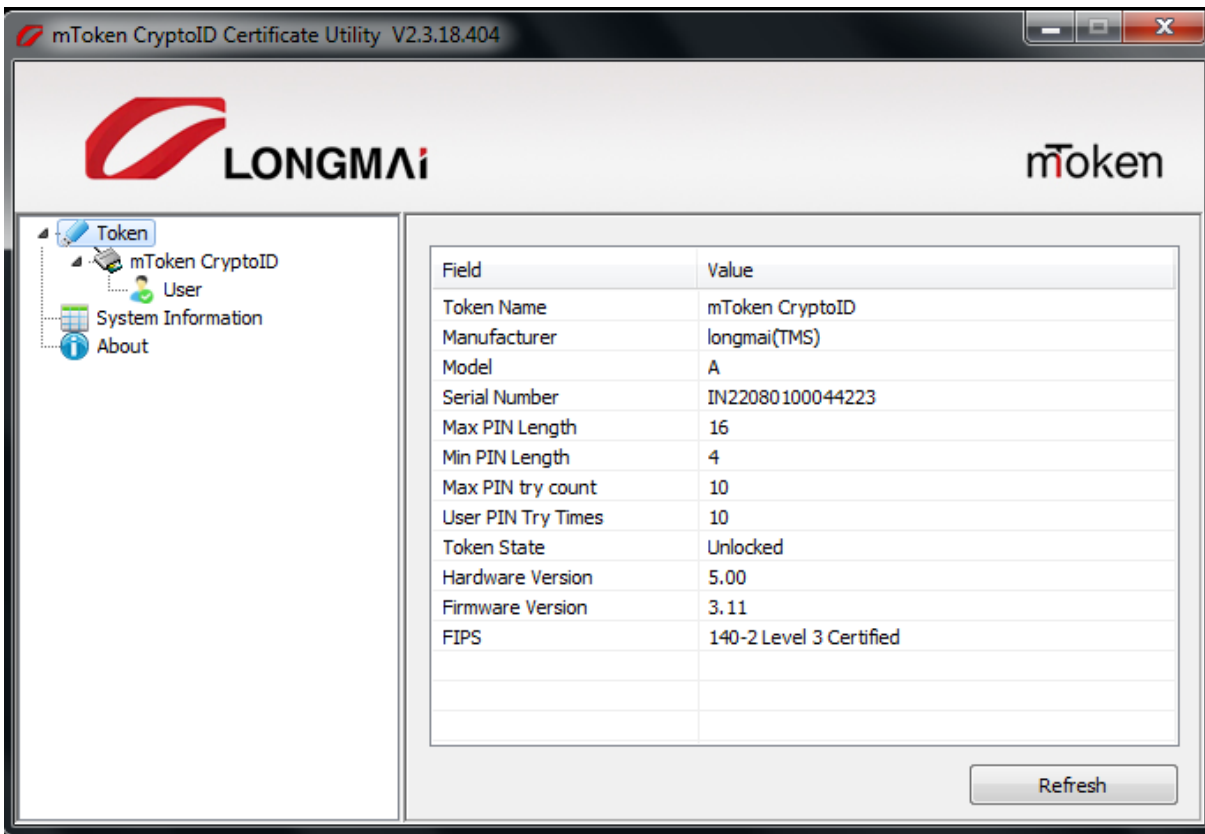

After click on Root Certificate you will get this page.

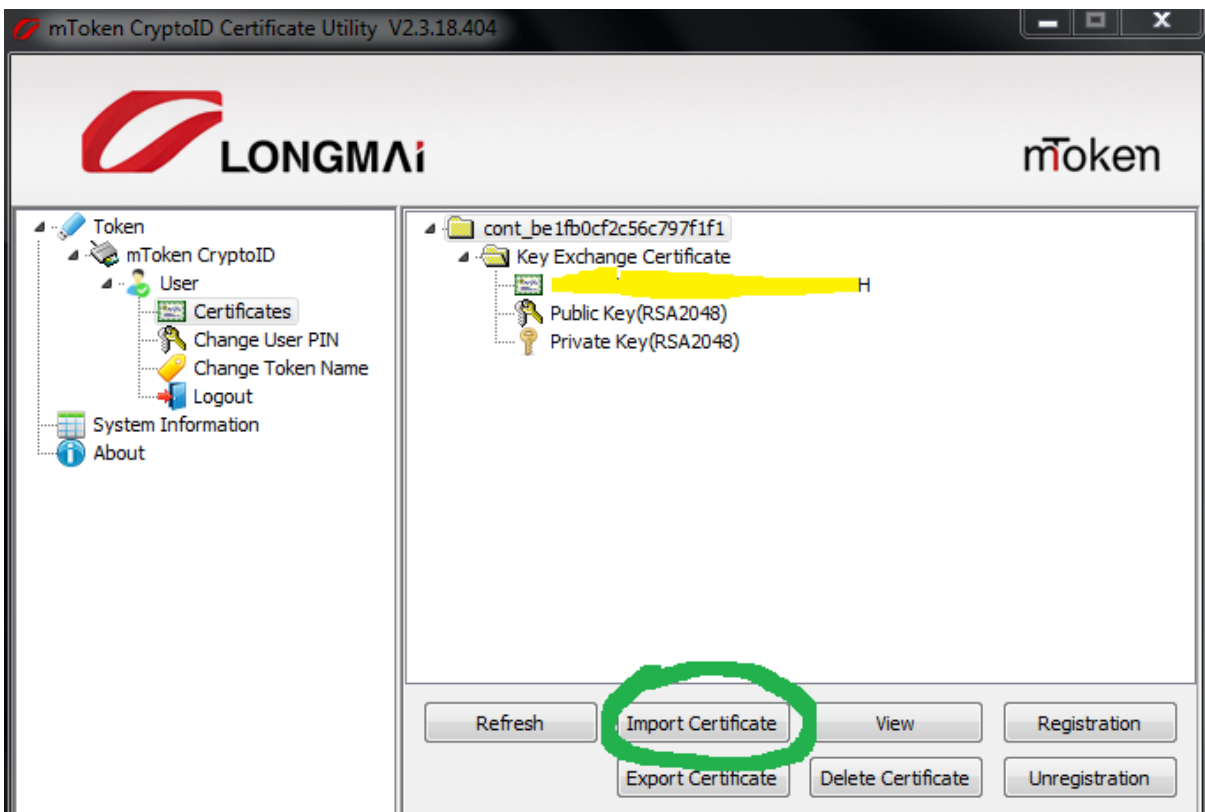

Now download top 3 file that's CCAINdia(2022), ProDigiSign CA(2022), ProDigiSign Sub CA DSC(2022).

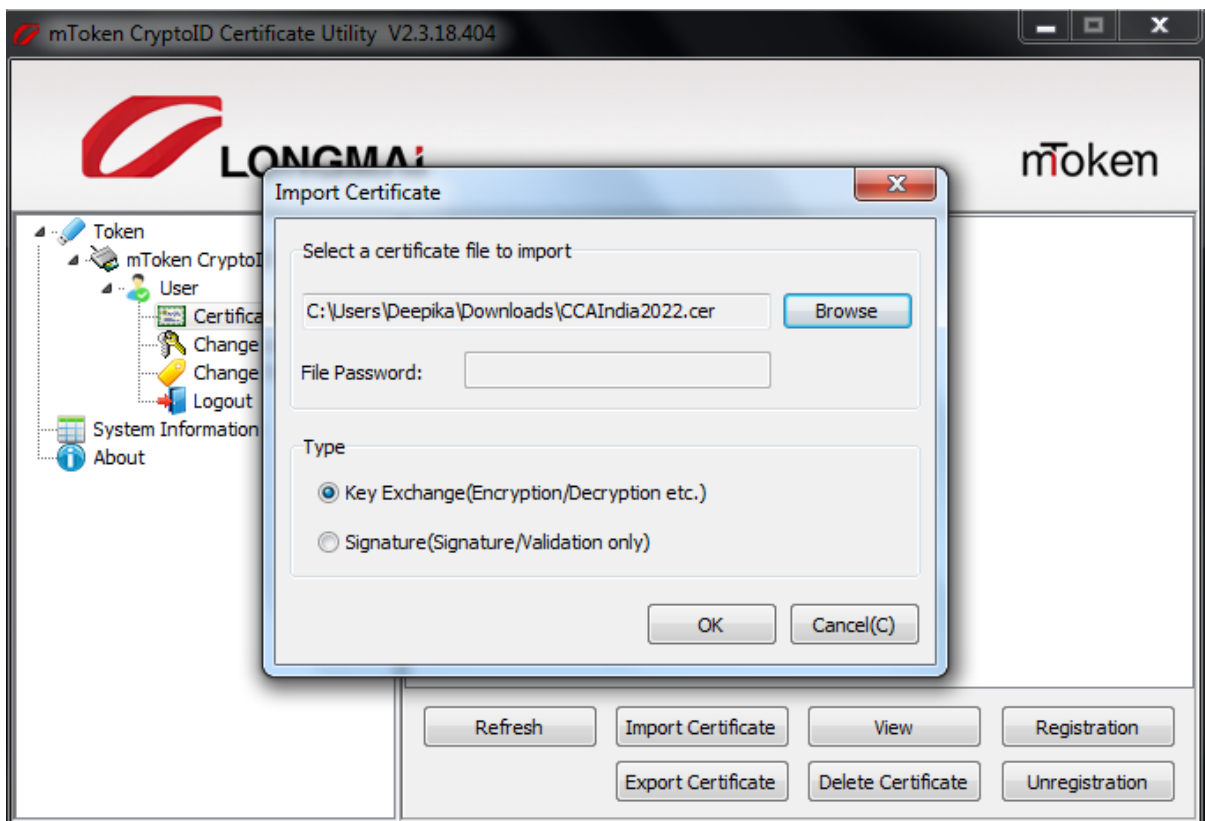

After download open your Token that you have, I am using mToken for example.

Now click on User Option login that.

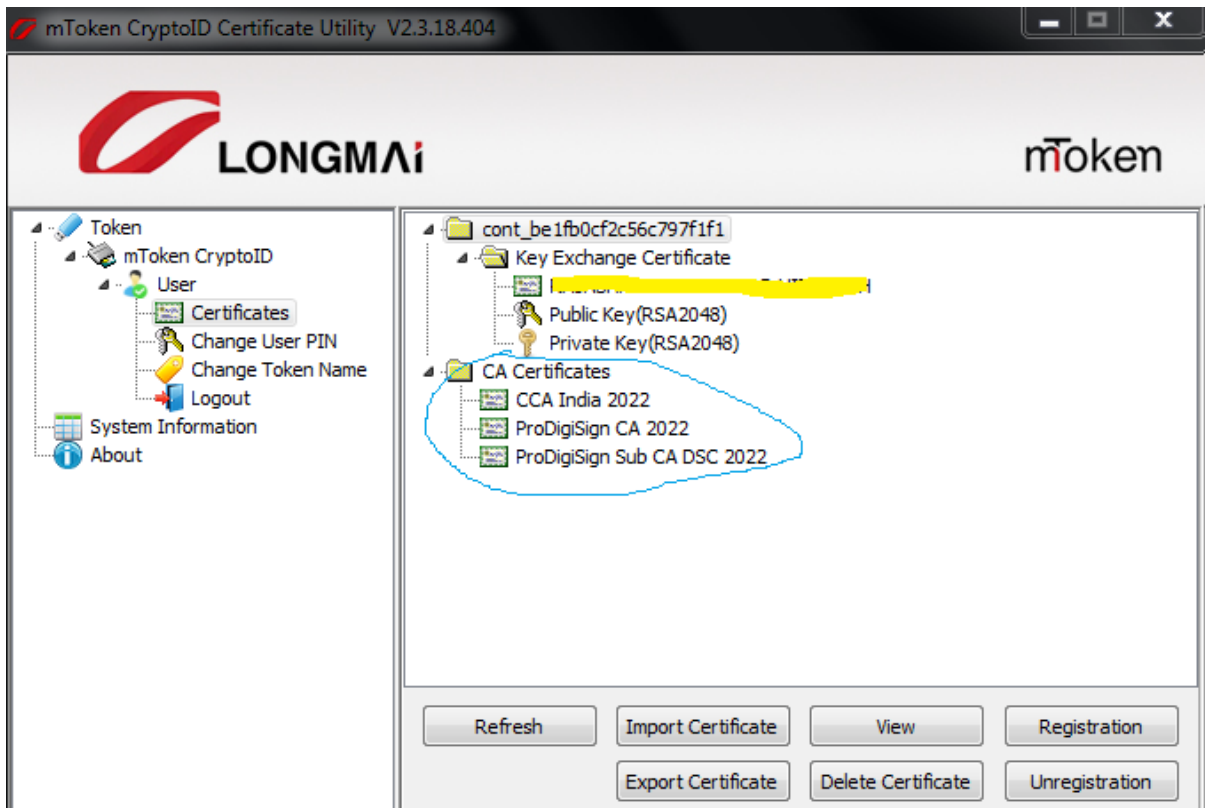

After login click on Import Certificate Button

Now click on Browse Button and select downloaded file and click on Ok Button.

Do same process for all three file that's CCAIndia(2022), ProDigiSign CA(2022), ProDigiSign Sub CA DSC(2022) .

After import you will get like this under CA certificate. Now Root Certificate is imported successfully.

Now your DSC is ready to use anywhere where you want as per your requirements.

Thanks

Team ProDigiSign
